

Budenheim presents FR CROS[®] 584 at the ECS in Nuremberg: “Do you care about shelf-life of intumescent paints?”

Budenheim extends the shelf life of intumescent coatings with a new product presented at the European Coatings Show (ECS, April 21-23). FR CROS[®] 584 is the first of a new generation of Ammonium Polyphosphates that will help to considerably extend the shelf-life of intumescent coatings especially in cold climates and sensitive formulations such as water-based coatings.

The new product completes the product family of FR CROS[®] grades with new specialty Ammonium Polyphosphates designed for fire protective intumescent coatings. This new grade of Ammonium Polyphosphate resolves the known limitations of the long-term stability of such coatings by noticeably prolonging their shelf-life. With this feature, Budenheim supports coating manufacturers by offering more environmentally friendly formulations.

To serve customers globally, Budenheim takes advantage of producing FR CROS[®] at two sites: La Zaida/Spain and Shanghai/China. Our high-quality production process employs a novel proprietary technology for the new grade.
